```
1 console.log('Loading function');
2
3 exports.handler = (event, context, callback) => {
4     console.log('Received event:',
5         JSON.stringify(event, null, 2));
6     console.log('name =', event.name);
7     var name = '';
8     if ('name' in event) {
9         name = event['name'];
10    } else {
11        name = 'Welt';
12    }
13    var greetings = 'Hallo ' + name + '!';
14    console.log(greetings);
15    callback(null, greetings);
16    };
```

✓ Execution result: succeeded ([logs](#))

The area below shows the result returned by your function execution. [Learn more](#) about returning results from your function.

```
"Hallo Herr Edlich!"
```
