## Serverless Architecture Pros And Cons

Learn about the benefits and drawbacks of one of the hottest trends in IT today.

### Eliminates server stack management

Despite the fact that server virtualization, OS, runtime, databases and other infrastructure components still are technically required, a serverless architecture eliminates the management of the server stack and any concerns/planning that have to go into the potential scaling up or down of the stack. All of these processes are automated and you simply pay for the compute time you use.
